

Pressure Seals Hybrid

The gas- and watertight seal that is available in any desired size.

Watertight up to 6 Bar

Pressure Seal (H)

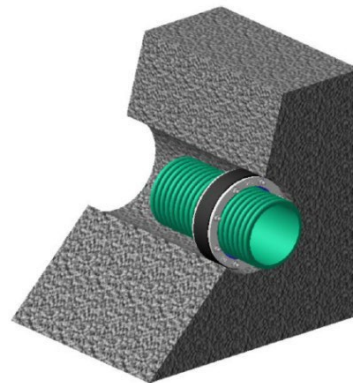

Product Description

The Pressure Seal (H) is a high-quality seal composed of two layers and specially developed for the reliable sealing of plastic piping systems. Thanks to the combination of a durable EPDM outer ring and an extremely flexible elastomer inner ring, this seal is particularly suitable for corrugated plastic pipes.

Due to the flexible nature of the inner ring, an optimal seal is achieved, even with pipes that have uneven surfaces or slight deformations.

Applications **Hybride**

- Corrugated Pipes
- Thin-walled Pipes
- Uneven Pipes

Properties:

- Installation without special tools
- Quick and easy to install
- Available in any desired size
- Available in single or double-layer versions, as well as split or hinged designs

Material:

- Stainless steel ring with stainless steel bolts and nuts
- Outer ring made of EPDM rubber
- Inner ring made of flexible and soft elastomer
